ABOUT ME

Full-Stack Software Engineer with over 4 years of experience architecting scalable, event-driven enterprise solutions. Specializing in modern frameworks (React, Express, Flutter) and advanced GCP infrastructure, I bridge the gap between robust software engineering and AI innovation. Proven track record of building AI-first SaaS products using Gemini, automating complex workflows, and engineering zero-downtime CI/CD pipelines. A proactive developer dedicated to crafting secure, high-performance applications from the ground up.

SKILLS

- **Frontend & Mobile:** React.js, Angular.js, Flutter, Zustand, TanStack Query, Tailwind CSS.
 - **Backend & API:** Express.js, Laravel, PostgreSQL, MySQL, Prisma, RESTful APIs, WebSockets.
 - **Cloud & DevOps:** Google Cloud Platform (GCP), Docker, CI/CD, Nginx, Linux. Vercel, Supabase
 - **AI & Integrations:** Python, Google Gemini, Machine Learning, n8n, Payment Gateways.
-

WORKING EXPERIENCE

Point Star Indonesia, Application Engineering

Apr 2025 - Now

- Spearheaded the development of **AI-first SaaS products**, engineering real-time bilingual voice translators, an interactive AI Receptionist with facial recognition, and smart event avatars utilizing WebSockets, Python, and **Gemini-native-audio**.
- Architected scalable, **event-driven GCP infrastructures** (Cloud Run, Cloud Functions, Pub/Sub) and implemented highly secure CI/CD pipelines using Workload Identity Federation (WIF), transitioning from manual PM2 server setups to **automated, zero-downtime GitHub deployments**.
- Designed automated enterprise workflows and ticketing systems by deploying **on-premise n8n agents** for content generation and utilizing Google Workspace integrations with **Pub/Sub triggers** to process real-time communication data.
- Established secure, enterprise-grade engineering standards by developing comprehensive frontend and backend boilerplates (React, Zustand, Prisma, Awilix, Zod) that **significantly accelerated new project initialization**, while seamlessly integrating Stripe and Xendit for global payment disbursements.

PT. Indokarya Mandiri Optima, Software Developer

Feb 2023 - Apr 2025

- Architected a comprehensive Asset Management System (Laravel, Angular JS) **supporting over 670 users**, integrating directly with **SAP** to seamlessly track and manage a portfolio of **7,000+ corporate assets** with dynamic multi-tier approvals.
- **Developed an offline-first mobile Inventory Management System** using Flutter, engineering features like secure photo evidence, geo-tagging, and offline stock synchronization designed specifically for field operations with low internet connectivity.
- **Engineered multiple concurrent projects**, delivering a full-scale POS system and developing advanced MVPs (Minimum Viable Products) for B2B E-commerce and Tender Management featuring complex **Payment Gateway and third-party PayLater API integrations**.
- **Managed end-to-end infrastructure and deployments** by provisioning Linux Debian servers, configuring Nginx web servers, and implementing SSL certificates to ensure secure and optimized application performance.

- Engineered two dedicated operational management applications using Laravel, **successfully digitizing daily workflows for over 600** active field personnel across the Cleaning and Security Service divisions.
 - Built automated reporting and metric calculation modules, replacing manual Excel processes to provide management with data-driven analytics and **reducing administrative reporting time by roughly 70%**.
 - Managed application deployment and server infrastructure by provisioning Windows-based **Virtual Machines (VMs) on Google Cloud Platform (GCP)** and internal servers, ensuring stable daily operations.
 - Directed comprehensive user training programs and facilitated system **onboarding across 35+ operational areas**, ensuring high adoption rates and a smooth transition to the new digital workflow.
-

EDUCATIONS

Mercu Buana University - Bachelor of Information Systems (GPA 3.85 / 4.00) | 2020 - 2024

- Bachelor's Thesis : "Prediction Analysis of Sleep Disorders Using Machine Learning-Based Techniques" (Jurnal Sistem Informasi Bisnis, 2025) - [Link Thesis](#)
 - Developed and evaluated machine learning models (Naive Bayes, Support Vector Machine, K-Nearest Neighbor, Logistic Regression, CNN, LSTM) to predict health data with high accuracy.
-

LANGUAGES

- Indonesia (Native)
- English (Conversational)
